

GATE C PROTECTED REVIEW - QuickCart Marketplace

RC2 | Recomputed quality/metrics | Evidence-chain diagnosis | State machine unchanged

Open only after a genuine saved Gate attempt. Diagnose the first attempt; never use this as a pre-attempt solution.

Layer 1 - Data-quality controls

Control	Expected
Valid rows	248
Rejected rows	3
Rejected QC0089	Missing Seller_Tier
Rejected QC0167	Invalid negative Seller_Cost
Rejected duplicate	QC0042 duplicate Order_ID

Layer 2 - Core protected metrics

Metric / slice	Expected
Overall on-time rate	54.8387%
Overall return rate	16.1290%
Overall margin rate	36.2619%
Overall avg rating	4.19
Bronze	n=86; on-time 34.8837%; return 16.2791%; margin 36.8110%; rating 3.95
Gold	n=42; on-time 66.6667%; return 23.8095%; margin 34.5837%; rating 4.31
Silver	n=120; on-time 65.0000%; return 13.3333%; margin 36.4782%; rating 4.33

Layer 3 - Deeper diagnostic controls

Slice	Expected
South	on-time 39.39%; return 22.73%
East	on-time 62.30%; return 13.11%
North	on-time 57.81%; return 14.06%
West	on-time 61.40%; return 14.04%
Fashion	return 22.22%; on-time 50.00%
Beauty	return 8.70%; on-time 50.00%
Electronics	return 16.90%; on-time 63.38%

What a strong finding should say

Bronze is the clearest on-time weakness, while Gold has the highest return rate and South is weak on both on-time and returns. Fashion is return-heavy, so category mix is a plausible confounder when discussing late delivery and returns.

Causal boundary

Late fulfillment/return association alone does not prove lateness caused returns; category, seller tier, region, product quality and selection can explain part of the pattern.

Evidence-chain pass rubric

Layer	Pass condition
Decision frame	Names the decision, analytical question, scope/comparison and Definition of Done
KPI contract	Numerator/denominator or formula, exclusions, grain and owner are explicit
Quality	Rejected rows are visible; no silent cleaning
Diagnosis	Prioritized comparisons; weighted/reconciled where required; one independent check
Findings	Three findings each include comparison, magnitude, scope and implication
Causal boundary	Observation/association separated from mechanism; alternatives named
Recommendation	Owner + action + timing + success measure + risk/dependency + stop/continue rule
Communication	Decision-first memo and 3-slide message-headline story
Defense	Answers denominator, causal and missing-data challenges without changing definitions

Targeted repair routing

Failure pattern	Repair focus
Decision unclear / analysis starts with charts	IBA1
Metric/grain/denominator drift	IBA2
Too many low-value cuts / no priority	IBA3-IBA4
Causal overclaim	IBA5
Finding is only a number or chart label	IBA6
Generic recommendation	IBA7
Memo buries decision	IBA8
Decorative or topic-title slides	IBA9
Defense changes definitions or hides uncertainty	IBA10
Broken end-to-end traceability	IBA11

Before a fresh retest

- Keep the original failed attempt.
- Write the exact failed competency and repair evidence.
- Close this review before changed evidence.
- A polished story cannot compensate for wrong metrics or unsupported causal claims.

Fresh retry and state route

Gate C is remediation-only. Clean C pass ends M09. There is no Gate D.

Repair only the named weak competency; do not retake by copying the same control table.
