

GATE C PROTECTED REVIEW - CarePoint Clinics

RC2 | Dataset-recomputed controls | Repair, do not copy

Open only after a genuine saved Gate C attempt. This review diagnoses the attempt. It is not a substitute for a fresh retest.

Layer 1 - Protected headline controls

Control	Expected
Fact Row Count	290
Patient Count	45
Net Billed	474,075.00
Direct Cost	187,110.00
Profit	286,965.00
Margin %	0.605316
Within Wait Target	162
Within Wait %	0.558621
Jan 2026 Net Billed	27,105.00
Dec 2025 Net Billed	26,467.00
Jan 2025 Net Billed	24,675.00
C01 Jan 2026 Target	46,150.00
Top entity by Net Billed	C04 / 113,666.00

Layer 2 - Entity and January grain controls

Use these only when a grand total passes but dimensional, target or time behavior is uncertain. The middle column is full-period actual; January actual is intentionally much smaller than the monthly target in these synthetic gates.

Entity	Full-period actual	Jan 2026 actual	Jan 2026 target
C01	85,662.00	4,965.00	46,150.00
C02	92,380.00	1,600.00	48,950.00
C03	88,639.00	5,840.00	51,750.00
C04	113,666.00	9,900.00	54,550.00
C05	93,728.00	4,800.00	57,350.00

Layer 3 - Diagnostic decision tree

- **Headline total wrong:** verify source columns and row expression first. Do not compensate with report filters.
- **Total right, entity rows wrong:** inspect one-side uniqueness, relationship direction and the active visual/slicer context.
- **Profit wrong but revenue right:** isolate the cost branch and confirm the cost is aggregated at fact-row grain.
- **Ratio/share wrong:** inspect numerator, denominator and REMOVEFILTERS scope. A share-of-total denominator should not remain trapped by the row category.
- **Jan/Dec/PY wrong:** validate the Date table, active date relationship and current month context. January is the deliberate year-boundary test.
- **Target wrong:** state the target table grain before touching DAX. Never invent a daily target or multiply targets through an invalid many-side relationship.
- **Visual numbers right but behavior wrong:** test Edit interactions, drillthrough and tooltip context one state at a time.
- **Publish/refresh/RLS claim uncertain:** record only observed capability. Desktop Refresh, publish, scheduled refresh and service membership/RLS are different controls.

Layer 4 - Minimum evidence before a pass

Evidence	Pass condition
PBIX/version	Saved and identifiable as this Gate attempt
Measure list / DAX	Base measures plus ratio/context/time/target measures visible
QA page	Headline totals + one entity breakdown + target + Jan/Dec/PY + one interaction state
Report behavior	One intentional interaction and one drillthrough/tooltip context tested
Refresh	Desktop refresh proven on a controlled valid source change
Service	Publish/scheduled refresh evidence only if account/workspace/license permits
Security	Static RLS role/View As tested where available; slicer/hidden page not described as security
Explain-back	Learner can explain one failure/recovery and one limitation without the review open

Fresh retry and route

Gate C is remediation-only. Clean C pass ends M06. There is no Gate D.

Close this review before the next attempt. Repair only the weak competency and create changed evidence; do not retake by reproducing the same control table.
