

M06 MODULE TEST - PROTECTED REVIEW

RC2 | Open after saved attempt | Diagnostic, not a Gate answer key

Open only after a genuine saved Module Test attempt. Compare definitions and context first, then controls. Close the review before the changed retry.

Protected numeric controls

Control	Expected
Line Count	361
Distinct Order Count	180
Distinct Customer Count	12
Gross Sales	4,426,197.00
Net Sales	4,074,127.25
Total Cost	2,469,180.00
Profit	1,604,947.25
Margin %	0.393936
Top Region by Net Sales	R3 / 1,368,507.60
Jan 2026 Net Sales	233,374.45
Dec 2025 Net Sales	119,033.85
Jan 2025 Net Sales	135,713.20
R1 Jan 2026 Target	278,000.00

What these controls diagnose

- **Rows vs entities:** Line Count, Order Count and Customer Count distinguish row grain from business-entity grain.
- **Row expression:** Gross Sales and Net Sales detect whether Quantity, Unit Price and Discount are combined correctly. Net Sales should not be a simple SUM of Unit Price.
- **Profit branch:** Profit must reconcile as Net Sales - Total Cost; Margin % must be Profit / Net Sales and should use DIVIDE.
- **Filter context:** Top Region checks dimensional propagation. If the grand total matches but regional values do not, inspect relationships/filter context before rewriting DAX.
- **Time boundary:** Jan 2026 previous month must reconcile to Dec 2025; prior-year must reconcile to Jan 2025.
- **Target grain:** R1 Jan 2026 target is 278,000 at Region + Month grain. Do not create a daily target unless a business allocation rule exists.

Assessment rubric

Area	Strong evidence	Typical repair
Measures	Explicit reusable base measures; correct row/entity grain	Replace implicit/raw aggregation; isolate wrong branch
Context	Share denominator removes only intended filter	Trace visual/slicer/page filters and REMOVEFILTERS scope
Target	Region + Month target joins and reconciles	Restate target grain; check relationship/key uniqueness
Time	Jan boundary + YTD behave correctly	Validate Date coverage/relationship/current context
Report	Each visual answers a named question	Remove duplicate decoration; simplify hierarchy
Interactions	Expected filter/highlight/none behavior proved	Use Edit interactions; retest one state at a time

Area	Strong evidence	Typical repair
QA	8+ independent Expected/Actual checks	Validate grand total and breakdown separately
Ops/RLS	Claims only what was actually tested	Separate Desktop refresh, publish, scheduled refresh, RLS

Fresh retry contract

Repair only the failed competency. Then close this review and complete a changed task: different Region/Category context, different denominator, different month boundary or different interaction state. Save the changed evidence as a separate attempt. Do not upgrade mastery from a copied control value.
