

M06 MODULE TEST - TRANSFER CHECK

RC2 | Non-gating | Fresh PBIX | Curriculum route unchanged

Status: non-gating mastery diagnostic. It does not add a new prerequisite and does not change the canonical route PBD1-PBD10 -> M-PBIR -> Gate A.

Purpose

Use a fresh PBIX built from **C1_M06_POWERBI_DAX_REPORTING_PRACTICE_DATA_RC1.xlsx**. This test checks whether the learner can transfer the full M06 skill set without reopening lesson solutions. Save the first attempt before opening the protected review.

Protected conditions

- Learner book may be closed for the first attempt; DAX documentation syntax lookup is allowed only if the assessment policy permits it.
- Do not open protected practice review, Gate reviews, solved PBIX files, or AI-generated solutions before saving the attempt.
- Equivalent correct DAX is acceptable. The business definition, grain, filter context and validation route matter more than matching one exact formula.
- Power BI Service actions are capability-dependent. Never invent publish, scheduled refresh or RLS service evidence.

Part A - Calculation layer (8 points)

- Create explicit measures for line count, distinct order count, distinct customer count, Gross Sales, Net Sales, Total Cost, Profit, Margin % and Average Order Value.
- Create one CALCULATE-based Region or Category measure and one share-of-total measure whose denominator deliberately removes only the intended breakdown filter.
- Explain why SUM, SUMX, DISTINCTCOUNT, DIVIDE and CALCULATE are used where they are used.

Part B - Target and time layer (6 points)

- Use Monthly_Targets only at Region + Month Start grain. Create target, variance and attainment measures.
- Build Jan 2026 Previous Month and Prior Year comparisons; January must correctly cross the year boundary to Dec 2025.
- Create one YTD measure from the valid Date table and validate its month-to-month behavior.

Part C - Report, interactions and QA (6 points)

- Build an executive page with 3-5 headline KPIs, a monthly trend, one ranking view and one detail view.
- Configure one intentional interaction and one drillthrough or report-page tooltip; record the expected and actual context.
- Create a QA page with at least eight Expected / Actual / Status checks covering totals, breakdowns, target, time and interaction behavior.

Pass interpretation

16-20: ready to proceed to M-PBIR / Gate A after normal evidence. **12-15:** targeted repair only. **0-11:** return to named weak competencies, not the whole module. This diagnostic never unlocks Gate B or Gate C.
