

M10 PROTECTED PRACTICE REVIEW

Open only after a genuine saved attempt

Compare control -> repair -> close -> changed retry -> append verification evidence.

AIA0 review - What AI is for in analyst work

1. Strong attempt should demonstrate

Your classification must name at least one allowed assist, one independent check, one privacy/permission boundary and one human-owned decision.

2. Expected reasoning / worked pattern

Classify five tasks. 'Explain a SQL error' -> useful draft + test query. 'Define Active Customer' -> AI may suggest wording, but owner/document controls meaning. 'Paste API key for debugging' -> stop; do not share secret. 'Rewrite verified memo' -> allowed with numbers/limitations locked. 'Choose who loses a benefit' -> analyst/organization policy and human review own the decision.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Write four columns: task -> what AI may propose -> what must be independently verified -> what requires human/policy approval. If any column is unclear, do not delegate yet.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA1 review - Prompt design: outcome, context, constraints and verification

1. Strong attempt should demonstrate

A reviewer can reproduce the intended metric/scope without asking what 'active', 'completed' or the denominator means.

2. Expected reasoning / worked pattern

Weak: 'Analyze this spreadsheet.' Stronger: 'Using Orders and Targets only, identify which region needs intervention next month. Orders are one row/order; revenue excludes Cancelled; targets are region-month. Return a 5-row table + three observations. Do not infer causes. Show row counts and metric formulas; I will independently recalc top-region revenue, return rate and target variance.'

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Underline six elements: outcome, source/scope, grain/definition, constraints, output, independent checks. Add only the missing element.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA2 review - Verify AI analysis and file-based answers

1. Strong attempt should demonstrate

Each material claim has a separate source/formula/filter check and a correction status. At least one check must be reproducible without the AI transcript.

2. Expected reasoning / worked pattern

Audit: AI says East revenue 1,890,000; controlled source says 1,802,000 -> FAIL numeric. AI says return rate 12.0%; approved definition returned/completed gives 9.6% -> FAIL definition/denominator. AI says West 420 orders; source count 398 -> FAIL count/filter. Record claim, check, evidence and correction separately.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Freeze the claim. Write source, scope, formula/denominator, expected row count, second calculation path. Recalculate smallest material component first.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA3 review - AI-generated Excel, SQL, Python and DAX

1. Strong attempt should demonstrate

All four cases name the rule, expected behavior and objective test. No case is considered fixed merely because it executes.

2. Expected reasoning / worked pattern

Excel: Eligible if Score ≥ 90 ; test 89/90/91. SQL: DISTINCT after joining order_lines does not prove one row/order—aggregate or validate grain. Python: dropna() may hide unknown product IDs—keep/review unmatched. DAX: Returns/All Orders violates returned/completed denominator—fix definition first.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Stop reading code. Write the business rule in one sentence, create 2-3 boundary/grain examples, then run the smallest test against the draft.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA4 review - AI-assisted analysis: plan, hypotheses and exploration

1. Strong attempt should demonstrate

Every proposed explanation is labeled fact/assumption/hypothesis and has an evidence/testability note. Top priorities are justified.

2. Expected reasoning / worked pattern

Renewal fell 72% to 65%. Generate six possible drivers using plan/region/tenure/support/payment/onboarding. Mark each as hypothesis unless already evidenced. Rank by impact x testability. Start with payment failures/onboarding if measured; defer vague 'market sentiment'. Stop when top actionable segments/drivers are stable enough for the decision.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

For each proposed item ask: What evidence would prove/disprove it? Would the answer change the decision? If no, deprioritize.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA5 review - Hallucinations, citations and source hierarchy

1. Strong attempt should demonstrate

Every claim has evidence with matching authority, scope and freshness. Unsupported claims remain labelled unsupported.

2. Expected reasoning / worked pattern

File contains 18,240 completed orders -> source file/query. Company definition changed in July -> approved business owner/data dictionary/change log. Current product supports feature -> current official provider docs. 'Onboarding caused renewal rise' -> experiment/quasi-experimental evidence; a product page or blog cannot prove causality.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Classify the claim: file/internal definition/current product/causal/other. Then choose the closest primary/authoritative evidence and check date/scope.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA6 review - Privacy, confidentiality and data minimization

1. Strong attempt should demonstrate

No credential/secret is shared; sensitive/confidential data has a justified approved path or is minimized/synthesized. Product settings are not used as the only governance evidence.

2. Expected reasoning / worked pattern

Customer names/emails/phones for a formula bug -> do not paste by default; reproduce with synthetic/minimized fields or approved environment. Salary sheet -> ask syntax using column names/sample, not salaries. Public synthetic course data -> acceptable course case. API key -> secret; revoke/rotate if exposed and do not share it.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Stop upload. List fields needed for the task, fields removable, sensitive/secret fields, approved environment/policy, and synthetic alternative.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA7 review - AI-assisted communication and documentation

1. Strong attempt should demonstrate

Every final number matches verified source; limitation remains visible; no causal strength increases; analyst is named final owner.

2. Expected reasoning / worked pattern

Verified: late-delivery 14.2%, East 21.8%, Jan-Jun only. AI rewrite invents poor warehouse staffing and immediate hiring. Correct: preserve exact rates/time scope, say East is higher, state cause is not established, recommend investigation/test rather than guaranteed staffing fix. Log removed causal claim and preserved limitation.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Make a locked-facts block first. Compare draft sentence-by-sentence: number, scope, causal strength, recommendation strength, limitation.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA8 review - Modern analyst AI surfaces: know them, do not depend on them

1. Strong attempt should demonstrate

Your matrix separates capability awareness from actual access and requires verification/approval/rollback for material side effects.

2. Expected reasoning / worked pattern

Compare: ChatGPT file analysis -> verify uploaded scope/calculation. Spreadsheet-native AI -> review changed cells/formulas and preserve workbook. Copilot Excel -> inspect edits/plan and permissions. Power BI Copilot -> model/DAX/report validation remains. Agent/connected app -> least-necessary permission + explicit approval for actions.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Use seven questions: What data? What action? What source? What can change? How verify? Who approves? How rollback? If any answer is unknown, use awareness-only mode.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.

AIA9 review - Integrated AI-assisted analyst workflow

1. Strong attempt should demonstrate

Reviewer can reproduce at least two material checks, trace every final claim to durable evidence, see privacy/source decisions and identify final approval owner.

2. Expected reasoning / worked pattern

Support backlog: frame 'is backlog improving enough to reduce escalation risk?'; define backlog/period; share only synthetic/approved aggregate; ask AI for analysis plan; use it to draft code/formulas/memo; independently verify trend/count/denominator; correct any invented cause; save source path, calculation, checks, corrected conclusion and limitation. Delete transcript mentally: deliverable should still stand.

3. What to compare

Compare decision/rule, approved input, source/grain/denominator, independent verification, privacy/source handling and final human judgment before wording/style. Equivalent correct workflows are acceptable.

4. Likely repair

Build the evidence chain without AI first: decision -> definitions -> approved source -> required checks -> final owner. Then place AI only in draft/brainstorm/mechanics stages.

5. Fresh retry

Close this review. Complete the changed task on the matching AIA worksheet without answer material. Append the retry and independent verification; only the fresh result upgrades mastery.
