

Repair 1 - Role, prompt and verification

Scope: AIA0-AIA2

- Bound AI role before use.
- Prompt decision/source/definition/verification, not just formatting.
- Recalculate material claim independently.
- AI re-answering itself is not independent proof.

Repair discipline

- Keep failed/partial attempt.
- Repair earliest broken control.
- Close review before changed retry.
- Recheck downstream conclusion after an upstream correction.

Repair 2 - Generated code and hypotheses

Scope: AIA3-AIA4

- Business rule before syntax.
- Keep join/grain/missing/denominator controls.
- Label fact/assumption/hypothesis.
- Rank by decision impact/testability and use stop rule.

Repair discipline

- Keep failed/partial attempt.
- Repair earliest broken control.
- Close review before changed retry.
- Recheck downstream conclusion after an upstream correction.

Repair 3 - Sources and privacy

Scope: AIA5-AIA6

- Match exact claim to authoritative/current source.
- A real citation may still be irrelevant.
- Minimize/redact/synthesize before sharing.
- Product data control does not equal employer/client approval.

Repair discipline

- Keep failed/partial attempt.
- Repair earliest broken control.
- Close review before changed retry.
- Recheck downstream conclusion after an upstream correction.

Repair 4 - Communication and modern surfaces

Scope: AIA7-AIA8

- Lock verified numbers/scope/limitations.
- Reject invented cause/recommendation strength.
- Evaluate surface by data/action/source/verify/approve/rollback.
- Do not depend on current button/plan availability.

Repair discipline

- Keep failed/partial attempt.
- Repair earliest broken control.
- Close review before changed retry.
- Recheck downstream conclusion after an upstream correction.

Repair 5 - Integrated workflow and Gate

Scope: AIA9 / Gate

- Final result must be reproducible without AI transcript.
- Save verification/correction/privacy/source trail.
- Human owner decides and approves material actions.
- Gate B/C require prior failure + saved attempt + review + repair + explicit assignment; no automatic progression.

Repair discipline

- Keep failed/partial attempt.
- Repair earliest broken control.
- Close review before changed retry.
- Recheck downstream conclusion after an upstream correction.
