

Gate A - Retail Margin Review

1. Open exactly

C1_M10_AI_ASSISTED_GATE_A_RETAIL_MARGIN_RC1.xlsx. Use Source_Data, AI_Draft and Verification_Log. Keep learner/practice/Gate review and external AI solving closed until your genuine attempt is saved.

2. No AI account required

The Gate supplies the flawed AI draft. Your job is verification and judgment: independent calculations, denominator/grain checks, data-quality flags, source critique, privacy decision, causal-language correction and final executive note.

3. Metric contract

Definitions, not answers: report raw rows, extra exact-duplicate rows, negative-revenue rows and privacy-flag rows separately. Completed nonnegative revenue = $\text{SUM}(\text{revenue})$ where $\text{status} = \text{'Completed'}$ AND $\text{revenue} \geq 0$ on the supplied rows. Return rate = $\text{COUNT}(\text{status} = \text{'Returned'}) / \text{COUNT}(\text{status} = \text{'Completed'})$ on the supplied rows. Top-region completed revenue uses the same Completed AND $\text{revenue} \geq 0$ rows grouped by region. Do not silently deduplicate these requested controls; a deduplicated view may be added only as a labelled sensitivity check.

4. Critical failures

Fabricated verification; unsafe sharing; material numeric/grain/denominator error; silent cleaning; accepting irrelevant/invented source; unsupported causal claim; or 'AI said so' as evidence can block a pass.

Evidence, defense and exact next route

5. Evidence to save

Verification_Log, corrected executive note, raw/duplicate/negative/privacy counts, completed nonnegative revenue, returned/completed rate, top-region result, source/privacy decision, one error/correction explanation and confidence 1-5.

6. Defense

Answer: Which AI claim was most dangerous? Which independent check disproved/corrected it? What data should not be shared? Which causal/source claim was unsupported? What can management defensibly do next?

7. Exact next route

A clean Gate A pass ends M10. Gate B only after failed A + saved attempt + Review A + targeted repair + explicit assignment. Review opens only after the saved attempt. Close review before any changed retry.
