

Gate A protected controls - Retail Margin Review

Control	Expected
Raw rows	48
Extra exact duplicate rows	1
Negative revenue rows	1
Privacy-flag rows	11
Completed nonnegative revenue	156,107.02
Return rate: Returned / Completed	0.4483
Top region	South
Top-region completed revenue	53,648.86

1. Metric-contract reminder

Definitions, not answers: report raw rows, extra exact-duplicate rows, negative-revenue rows and privacy-flag rows separately. Completed nonnegative revenue = SUM(revenue) where status='Completed' AND revenue>=0 on the supplied rows. Return rate = COUNT(status='Returned') / COUNT(status='Completed') on the supplied rows. Top-region completed revenue uses the same Completed AND revenue>=0 rows grouped by region. Do not silently deduplicate these requested controls; a deduplicated view may be added only as a labelled sensitivity check.

Diagnostic repair route - do not copy

2. Numbers / denominator

Recount raw/extra duplicate/negative/privacy flags separately. Then apply the exact supplied-row filters for completed nonnegative revenue, Returned/Completed rate and top-region completed revenue.

3. Duplicate sensitivity

The requested protected controls do not silently deduplicate. If you want to understand duplicate impact, calculate a second explicitly labelled sensitivity view and explain the difference.

4. Privacy / source / causality

Do not share privacy-flag fields merely because the draft asks. Reject a source that does not support the exact claim and reject causal wording not established by the dataset/design.

5. Fresh retry

A clean Gate A pass ends M10. Gate B only after failed A + saved attempt + Review A + targeted repair + explicit assignment. Close this review, repair only the weak competency, and append changed evidence. B/C are never automatic.
