

M10 internal-QA evidence

Integrated QA

156/156 PASS.

Learner book

37 pages; AIA0-AIA9 each use the exact 16-stage beginner-first sequence.

Practice workbook

15 sheets; one direct AIA0-AIA9 learner sheet plus current references, evidence log and mastery tracker.

Workbook render repair

Initial AIA0-AIA9 worksheet objects rendered blank. All ten objects were recreated, rerendered and visually verified.

Gate metrics

A/B/C current regenerated Source_Data independently reproduce all protected numeric controls exactly.

PDF visual QA

65 pages across learner/review/repair/Gate PDFs rendered and inspected.

Source freshness

Current official OpenAI/Microsoft references were checked on 2026-09-11; product access is non-required for Gate mastery.

Defects caught before promotion

Missing AIA0 practice route

Inherited workbook had P-AIA1-P-AIA8 plus M-AIA but no direct AIA0 practice sheet. RC1 restores AIA0-AIA9 one-to-one routing.

Worksheet rendering defect

Ten lesson sheets contained values but rendered blank. Their worksheet objects were recreated and all ten now render visibly.

Gate metric ambiguity

Protected metric definitions are written before calculation: raw rows, duplicate flag, negative revenue, privacy flags, Completed nonnegative revenue, Returned/Completed rate and top-region Completed revenue.

Product-surface brittleness

Current ChatGPT/Excel/Power BI AI surfaces are taught through transferable controls rather than requiring one plan, button or add-in.

Scanner line-wrap false positive

Gate C no-Gate-D rule was present but split across extracted lines; the scanner now normalizes PDF whitespace.

Release boundary

M10 status

Internal-QA module candidate PASS. This is not a whole-course learner release.

Remaining module

M11 Portfolio/Capstone/Hiring still needs clean rebuild and module QA.

Mentor synchronization

Deferred until M11 and all final module routes/page maps are stable.

Whole-course handoff

COURSE_1_HANDOFF.json is generated only after whole-course Mentor + package QA passes.
