

Gate C - QuickCart Marketplace

1. Open exactly

C1_M09_BUSINESS_ANALYSIS_GATE_C_QUICKCART_RC1.xlsx. Use the Definitions, Data_Raw and Submission sheets. Keep all review/solution material closed.

2. Required chain

Decision framing -> KPI definitions -> data-quality audit -> prioritized diagnosis -> independent validation -> three findings -> causal boundary -> owned recommendation -> success/risk rule -> executive headline -> 3-slide story -> defense.

3. Tool rule

Use one primary analysis tool. Tool complexity is not scored. Reconcile at least one material result independently and save the evidence path.

4. Critical failures

Fabricated evidence, silent denominator/grain error, hidden quality handling, unsupported causal claim, recommendation not traceable to validated evidence or changing definitions to fit a desired story can block a pass.

Submission, defense and exact next route

5. Evidence to save

Filled Submission; source/rejection counts; KPI formulas/denominators; one independent reconciliation; three findings with comparison/magnitude/scope; causal boundary; recommendation owner/success/risk; headline/story; challenge notes; confidence 1-5.

6. Defense

Explain the decision in 2 minutes, then answer one denominator/grain challenge, one causal challenge and one missing-data/uncertainty challenge without changing the metric definition.

7. Exact next route

Gate C is remediation-only after failed B + repair + explicit assignment. Clean C pass ends M09. There is no Gate D. Review opens only after the saved genuine attempt. After review, close it and complete changed evidence.
