

Gate C protected controls - QuickCart Marketplace

Control		Expected
Valid rows		248
Rejected rows		3
Overall on-time rate		0.548387
Overall return rate		0.161290
Bronze	n=86; on-time=0.348837; return=0.162791; margin=0.368110; rating=3.95	
Gold	n=42; on-time=0.666667; return=0.238095; margin=0.345837; rating=4.31	
Silver	n=120; on-time=0.650000; return=0.133333; margin=0.364782; rating=4.33	

Diagnostic rubric - repair the chain, do not copy

1. If counts/metrics differ

Trace raw -> rejection rules -> valid analysis set -> numerator/denominator/weighted calculation. Repair the earliest mismatch.

2. If findings are weak

Add versus-what, magnitude, scope and decision implication. A chart label/number alone is not an insight.

3. If causal wording is too strong

Rewrite as observation/association; name plausible alternatives/confounders and the stronger evidence needed for a causal claim.

4. If recommendation/story is generic

Trace it to validated evidence, add owner/action/timing/success/risk/stop rule, and keep only communication elements serving the decision.

5. Fresh retry

Close review. Repair the named competency on changed evidence and follow the protected Gate state; B/C are never automatic.
