

Repair 1 - Decision framing & metrics

Scope: IBA1-IBA2

- Decision before topic/chart.
- Write numerator, denominator, exclusions and grain.
- Do not invent business definitions; record open questions.
- Validate one metric definition against controlled definitions/source.

Repair discipline

- Keep failed/partial artifact.
- Repair earliest broken evidence-chain link.
- Close review before changed retry.
- Revalidate downstream recommendation/communication after upstream repair.

Repair 2 - Prioritization & diagnosis

Scope: IBA3-IBA4

- Rank analyses by decision value.
- Keep scopes/periods comparable.
- Recompute weighted rates/totals, not average subgroup percentages.
- Stop slicing when additional cuts do not change the decision.

Repair discipline

- Keep failed/partial artifact.
- Repair earliest broken evidence-chain link.
- Close review before changed retry.
- Revalidate downstream recommendation/communication after upstream repair.

Repair 3 - Causality & insight

Scope: IBA5-IBA6

- Separate observation, hypothesis and causal proof.
- Name confounders/reverse causality.
- Insight needs comparison+magnitude+scope.
- Non-material pattern may imply no action.

Repair discipline

- Keep failed/partial artifact.
- Repair earliest broken evidence-chain link.
- Close review before changed retry.
- Revalidate downstream recommendation/communication after upstream repair.

Repair 4 - Recommendation, memo & story

Scope: IBA7-IBA9

- Owner/action/timing/success/risk/stop rule required.
- Expected benefit is hypothesis, not promise.
- Lead memo with message, not methodology.
- One message headline per slide; remove decorative outputs.

Repair discipline

- Keep failed/partial artifact.
- Repair earliest broken evidence-chain link.
- Close review before changed retry.
- Revalidate downstream recommendation/communication after upstream repair.

Repair 5 - Defense, integration & Gate

Scope: IBA10-IBA11 / Gate

- Answer stakeholder question first and reproduce evidence.
- Say 'not known yet' when evidence cannot support more.
- Trace recommendation backward to source/grain/definition.
- Gate B/C require prior failure + saved attempt + review + repair + explicit assignment; no automatic progression.

Repair discipline

- Keep failed/partial artifact.
- Repair earliest broken evidence-chain link.
- Close review before changed retry.
- Revalidate downstream recommendation/communication after upstream repair.
