

M09 internal-QA evidence

Integrated QA

130/130 PASS.

Learner book

40 pages; IBA1-IBA11 each use the exact 16-stage beginner-first teaching sequence.

Direct practice architecture

19-sheet RoutePulse workbook with one distinct IBA1-IBA11 learner worksheet, controlled source/reference sheets, append-only evidence and mastery tracking.

Protected metrics

Current regenerated workbook bytes independently reproduce RoutePulse practice plus CareBridge/StreamFit/QuickCart Gate protected controls exactly.

Visual QA

40 learner-book pages + 12 protected-practice pages + 5 repair pages + 12 Gate pages rendered and inspected. Nineteen representative current-workbook renders were inspected.

Source preservation

All six useful inherited placements are retained; all four unique visual URLs are now clickable from the learner book.

Gate protection

A clean Gate A pass ends M09; B/C require prior failure + saved attempt + protected review + repair + explicit assignment.

Defects caught before promotion

Shared-route ambiguity

Inherited IBA3/IBA4 and IBA5/IBA6 practice routes reused generic sheets. RC1 gives every canonical lesson its own direct worksheet.

Stale candidate isolation

Older practice/Gate candidate files were removed from the active build set and quarantined outside the package so they cannot be shipped accidentally.

Missing IBA9 hyperlink

The third optional IBA9 visual was preserved in text but lacked a clickable URI. The annotation was added to the regenerated learner book; a 40-page visual diff confirmed zero rendered-page changes.

Scanner false positives

TOC destination types were normalized before comparison, and causality QA now recognizes the actual observation/confounder/causal-warning wording.

Evidence chain

The rebuilt system keeps definition, grain, validation, causal boundary, recommendation owner/success/risk and stakeholder defense visible rather than treating a polished chart as completion.

Release boundary

M09 status

Internal-QA module candidate PASS. This is not a whole-course learner release.

Remaining modules

M10 AI-Assisted Analytics and M11 Portfolio/Capstone/Hiring still require clean rebuild and module QA.

Mentor synchronization

Still intentionally deferred until the remaining books/workbooks/projects/Gates have stable final routes.

Whole-course QA

End-to-end Course 1 learner route, Mentor/PWA/device behavior and final handoff remain later release gates.
