

Repair 1 - Business logic & conditional aggregation

Scope: EFA1-EFA2

- Rewrite the business rule in plain English before formulas.
- Test exact boundaries, blanks and cancelled/missing cases.
- Align every SUMIFS/COUNTIFS/AVERAGEIFS range to the same source rows.
- Fresh retry: changed criteria table + one manual/filter reconciliation.

Repair discipline

- Repair only the named weak competency.
- Keep the failed/partial attempt in Evidence_Log.
- Close answer material before the changed retry.
- Gate B/C remain locked unless explicitly assigned after the prior Gate failure.

Repair 2 - Cleaning, text, dates, lookups & errors

Scope: EFA3-EFA6

- Preserve raw and use helper/prepared fields.
- Do not extract fixed positions unless the format is stable.
- Prove master-key suitability before XLOOKUP; keep Not Found visible.
- Repair structural errors instead of wrapping everything in IFERROR.

Repair discipline

- Repair only the named weak competency.
- Keep the failed/partial attempt in Evidence_Log.
- Close answer material before the changed retry.
- Gate B/C remain locked unless explicitly assigned after the prior Gate failure.

Repair 3 - Quality controls

Scope: EFA7

- Separate prevention, detection and correction.
- Count missing/invalid/duplicate/not-found issues before changes.
- After correction/rejection, reconcile row counts and important totals.
- Fresh retry: changed customer input table + quality summary.

Repair discipline

- Repair only the named weak competency.
- Keep the failed/partial attempt in Evidence_Log.
- Close answer material before the changed retry.
- Gate B/C remain locked unless explicitly assigned after the prior Gate failure.

Repair 4 - Pivots and reporting

Scope: EFA8-EFA9

- State result grain and aggregation before judging a Pivot.
- Reconcile one Pivot total to source.
- Use My_Pivots and My_Report; test slicer default/filter/clear states.
- Fresh retry: new summary question and changed visual choice.

Repair discipline

- Repair only the named weak competency.
- Keep the failed/partial attempt in Evidence_Log.
- Close answer material before the changed retry.
- Gate B/C remain locked unless explicitly assigned after the prior Gate failure.

Repair 5 - Power Query, relationships and project defense

Scope: EFA10-EFA11 / M-XLA

- Find the earliest failing Applied Step; never hand-fix loaded output.
- Prove one-side key uniqueness before creating a relationship.
- Trace report -> Pivot -> prepared metric -> transformation -> raw grain.
- Fresh retry: rebuild the weak project component and rerun reconciliations.

Repair discipline

- Repair only the named weak competency.
- Keep the failed/partial attempt in Evidence_Log.
- Close answer material before the changed retry.
- Gate B/C remain locked unless explicitly assigned after the prior Gate failure.
