QUESTION

MEASURE

GRAIN

TRUST

EVIDENCE

What M00 does

M00 teaches the analyst thinking that makes later Excel, SQL, Power BI and Python work safer: clarify the decision, define the question and metric, state grain, test quality, validate evidence and communicate only what the evidence supports.

Exact route

- 1 Open **01_LEARN/C1_M00_FOUNDATION_BEGINNER_FIRST_LEARNER_BOOK_RC1.pdf** and study O1 through F6 in order.
- 2 For each lesson: follow the teacher demonstration, close it as much as practical, complete the changed independent task, validate it and save evidence.
- 3 After all nine lesson-level attempts, open **02_PRACTICE/C1_M00_FOUNDATION_BEGINNER_FIRST_PRACTICE_BOOK_RC1.pdf**.
- 4 Save a genuine cumulative practice attempt. Only then may **03_REVIEW_PROTECTED/C1_M00_FOUNDATION_PRACTICE_REVIEW_PROTECTED_RC1.pdf** open if needed.
- 5 Close review and complete the changed fresh retry.
- 6 When the Mentor assigns the assessment, take **04_GATE_PROTECTED/C1_M00_FOUNDATION_GATE_A_RC1.pdf**.
- 7 A clean Gate A pass ends M00. Gate B exists only after failed A + saved attempt + review/repair + explicit assignment. Gate C has the same rule after failed B.

NO TIMER PASS

Study time is planning information only. M00 mastery is based on independent evidence, validation and explanation. There is no forced 25-minute timer and no percentage-average shortcut.

EVIDENCE LOG

Use **02_PRACTICE/C1_M00_FOUNDATION_EVIDENCE_LOG_RC1.xlsx** as the append-only evidence index when convenient. The workbook stores pointers and outcomes; it does not contain protected solutions.

What stays closed

- Practice review stays closed until the cumulative practice attempt is saved.
- Gate review stays closed until that Gate attempt is saved.
- Gate B stays closed unless Gate A failed and repair was completed.
- Gate C stays closed unless Gate B failed and second repair was completed.

M00 exit

EXIT RULE

Leave M00 only when all critical Foundation competencies are demonstrated. If one critical competency fails, repair that competency and use the assigned fresh retry/Gate route.
