

Foundation Gate B

Fresh protected competency assessment - ParcelPulse Delivery

QUESTION	MEASURE	GRAIN	TRUST	EVIDENCE
----------	---------	-------	-------	----------

PROTECTED MATERIAL	Lesson/practice reviews closed. Web/tutorials closed. AI solving closed. Gate review closed. Use only this scenario and basic writing tools. Save the attempt before any review opens.
GATE PROGRESSION	Gate B is not a percentage test. Every critical competency must pass. A critical failure means Repair Required even if the rest is strong. This Gate exists only because the previous Gate failed and repair was explicitly assigned.

Scenario

ParcelPulse Delivery - "Late deliveries are increasing. Show which hubs and weeks need attention first."

Embedded source schema cards

Conceptual source	delivery_summary
Intended grain	one intended row per DeliveryID
Fields	DeliveryID, Hub, Region, PromisedAt, DeliveredAt, Status, ServiceLevel, LastUpdatedAt
Conceptual source	delivery_events
Intended grain	many rows per DeliveryID
Fields	EventID, DeliveryID, EventType, LocationCode

Official reference: Network Operations publishes completed delivery counts by hub/week but no approved on-time-rate denominator or lateness threshold.

Known ambiguity / limitation: The business has not defined grace minutes, whether cancelled/failed deliveries are eligible, or which timestamp governs cross-midnight cases. There is no reliable root-cause field for traffic, staffing or customer unavailability.

What you submit: one four-section Analyst Brief + short defense + Ready/Not Ready judgment. No Excel, SQL, Power BI or Python is required.

Section 1 - PROBLEM

Primary stakeholder / user	
Decision to support	
Clarification questions - Decision / Comparison / Scope / Time / Meaning	
Bounded analytical question	
Confirmed facts vs assumptions	

Section 2 - MEASURE + DATA

Metric / KPI + why it matters	
Calculation rule - numerator / eligible denominator if rate; unit; time basis; includes/excludes	
Definition owner / approver	
Source grain + expected repetition	
Result grain	
Minimum required data / business rules	

Section 3 - TRUST CHECKS

Completeness	
Uniqueness at stated grain	
Validity	
Consistency	
Timeliness	
Analysis validation	
Reconciliation / comparable reference	
Sanity check	

Section 4 - DEFINITION OF DONE + DEFENSE

Testable acceptance criteria	
Assumptions / limitations	
Ready / Not Ready + exact blocker if not ready	
Defense 1 - metric/denominator	
Defense 2 - repeated ID / grain	
Defense 3 - one conclusion the scenario cannot support	
Defense 4 - evidence that would make you trust the final result	

Competency decision sheet

This is a competency Gate. Do not add points and average them. Mark each critical competency separately.

C1	F2 Framing	Bounded decision-linked question; facts separated from assumptions.	PASS / REPAIR
C2	F3 Metric/KPI	Reproducible metric definition; explicit eligible denominator for a rate; unresolved rules visible.	PASS / REPAIR
C3	F4 Grain/Data	Correct source/result grain; legitimate repetition; minimum required fields/rules.	PASS / REPAIR
C4	F5 Data Quality	Five scenario-specific checks with impact/next action.	PASS / REPAIR
C5	F6 Validation/DoD	Internal validation, comparable reconciliation, sanity check, assumptions/limitations, testable Definition of Done.	PASS / REPAIR
C6	F1 Decision Support	Interpretation stays within evidence and supports the stated decision without unsupported cause claims.	PASS / REPAIR

CRITICAL-FAILURE RULE	Any one of these is an automatic Repair Required: undefined/wrong rate denominator; invented business definition hidden as fact; expected many-row history treated as duplicate source rows; quality checks at the wrong grain; non-comparable reconciliation presented as proof; unsupported causal claim; untestable Definition of Done.
NEXT ROUTE	All six PASS and no critical failure -> M00 Gate complete. Otherwise save Gate B attempt -> open Gate B Review -> second targeted repair -> close review -> only if explicitly assigned take Gate C.
