

Objective data-quality controls

Control	Expected
Raw data rows	221
Extra exact duplicate rows	1
Unknown Product_ID rows	1
Discount outside 0-1	1
Blank Region rows	1
Malformed Actual_Date rows	1

How to use these controls

If your counts differ, repair detection/raw-preservation first. Do not copy a cleaning action automatically; treatment can differ by metric and must be documented.

Reference reconciliation route - not a required dashboard

Corrected reference policy

Drop only the extra exact duplicate. Exclude the invalid-discount row from revenue/margin calculations that require a valid 0-1 discount. Flag the blank-Region row but KEEP it in overall revenue/return/on-time metrics; exclude it only from comparisons that require a known Region. Keep the unmatched Product_ID visible and exclude it only from margin until its cost is resolved. Exclude the malformed Actual_Date only from calculations requiring a valid Actual_Date.

Net revenue check

Valid-discount, non-Cancelled overall net revenue = 1,498,615.00. Blank Region remains in this overall metric.

Return-rate check

Eligible Completed-or-Returned rows = 174; Returned = 38; rate = 0.2184. Blank Region remains in the overall denominator.

On-time check

Eligible rows with valid Actual/Promised dates = 173; on-time = 91; rate = 0.5260. The malformed Actual_Date is excluded only here.

Margin check

Matched-product reference margin = 558,925.00. The unmatched Product_ID stays visible and is excluded only from margin until cost is resolved.

Decision / communication review

No single winning segment

Different defensible prioritizations are possible. Pass depends on correct metric/grain/validation and whether the recommendation follows your evidence.

Region-specific comparison rule

A blank Region row can remain in overall metrics but cannot be assigned to a named Region. Exclude it from Region-specific comparisons and disclose the count.

Causal boundary

Region/channel/category/delivery comparisons are observational. Describe association/concentration; do not claim a factor caused returns/revenue/margin without stronger design.

Fresh repair

Close this review. Repair the earliest weak competency, rerun downstream results it affects, and update README/visuals if numbers change.

Next route

When all 12 capstone competencies pass, continue to PCH7. Do not use this review as a template for the Job Readiness Gate technical cases.
