

M11 internal-QA evidence

Integrated QA

198/198 PASS.

Learner book

49 pages; PCH1-PCH14 each use the exact 16-stage beginner-first teaching sequence with 14 internal TOC links.

Practice ecosystem

Direct PCH1-PCH14 practice workbook plus Portfolio Builder, independent MarketPulse capstone, resume/profile kit, job tracker, interview handbook and GitHub templates.

Current-byte metrics

MarketPulse protected controls and Job Readiness Gates A/B/C independently recompute from the regenerated workbook bytes.

Visual QA

95 PDF pages, 1 resume DOCX page and final workbook renders inspected. Generated workbook clipping was repaired before promotion.

Gate state

Job Readiness Gate A is terminal on clean pass; B/C are remediation-only after prior failure + review + repair + explicit assignment.

Defects caught before promotion

Gate B protected control

Inherited 2.91 support-ticket average used all 44 members. The actual Gate cohort is 32 Eligible_Renewal=1 members; correct protected average is 2.81.

Capstone blank-Region policy

Protected numbers included the blank-Region row in overall metrics while an old sentence said to exclude it. Policy corrected: keep it in overall metrics, exclude it only from Region-specific comparisons.

Workbook visual clipping

Long title/instruction cells were formatted across columns without merges. Authoritative workbook family was repaired and rerendered.

Job tracker dashboard

Inherited hard-coded zero summary was replaced with formula-driven counts tied to Applications.

Direct lesson routing

A canonical PCH1-PCH14 practice workbook now makes the exact learner route explicit instead of relying on scattered companion artifacts.

Release boundary

M11 status

Internal-QA module candidate PASS. M00-M11 module-level rebuild is now complete.

Mentor next

Course 1 Mentor must now be synchronized to the stable rebuilt filenames, page maps, protected-review/Gate routes and source registry.

Whole-course QA

After Mentor sync: static/runtime/PWA/backup/restore/responsive and complete Course 1 route/package verification.

Handoff JSON

COURSE_1_HANDOFF.json is still intentionally blocked until whole-course release QA passes.
