

M11 PROTECTED PRACTICE REVIEW

Open only after a genuine saved hiring artifact

Diagnose -> close review -> changed artifact -> validate -> append evidence.

PCH1 review - What a fresher portfolio must prove

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

A fresher portfolio must prove business framing, correct tool use, validation, communication and independent work. A small project with transparent decisions and checks is stronger than a polished screenshot with no evidence chain.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Counting screenshots as evidence; polished dashboard with no validation; skill claimed without artifact; tutorial copy presented as independent work.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH2 review - Choose projects with different business stories

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

Choose projects that differ in business question, data structure and analytical method. A recruiter should see range: performance/operations, retention/cohort, and service/customer experience are useful contrasts.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Three near-identical sales dashboards; tool stuffing; selecting project because it looks pretty; no reason each project proves something different.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH3 review - Build a GitHub project repository recruiters can inspect

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

A recruiter should be able to open a repository and understand the problem, files, method, validation and result without asking you to explain the folder structure. Keep raw data, prepared outputs and documentation clearly separated.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Repo opens with unexplained files; README link broken; raw/private data published; no validation folder; recruiter must guess run order.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH4 review - Write the project README as a business case

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

A README is a business case, not a diary. Start with the decision/problem, then data/grain, method, validation, findings, recommendation, limitations and reproducibility steps.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

README starts with 'I learned SQL'; missing grain/definition; findings have no magnitude; recommendation not traceable; reproduce steps missing.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH5 review - Project validation before publishing

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

Before publishing, reconcile important metrics, inspect joins/cardinality, verify source-to-chart consistency, check that screenshots match current files, remove secrets/private data and challenge every claim in the README.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Only checking formatting; stale screenshot; README number differs from workbook; secret/API key left in notebook; join duplicates ignored.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH6 review - Final capstone: independent end-to-end analyst work

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

The capstone must be independent. The learner chooses the workflow and tools, preserves raw data, documents definitions, investigates injected data-quality issues, validates across at least two independent checks and defends the recommendation.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Following tutorial answer; silently deleting bad rows; ignoring unmatched Product_ID; wrong return denominator; claiming channel/delivery caused outcomes; recommendation unsupported.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH7 review - Resume for a junior Data Analyst

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

A junior resume should make evidence easy to scan: targeted headline/summary, relevant skills, 2-3 strong projects with quantified facts you can defend, education, and truthful experience/activities. Never invent work experience.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Keyword dump; rating bars; invented employment; unprovable numbers; three-page fresher resume; projects described vaguely with no evidence.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH8 review - LinkedIn / professional profile without overclaiming

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

Your professional profile should match your resume and repositories. Use an accurate current status such as aspiring/junior analyst candidate when appropriate. Showcase projects and learning evidence without pretending a course project was employment.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Headline implies employment you do not have; dates differ from resume; course project called client work; featured repo broken; About full of unsupported tools.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH9 review - Application strategy: targeted volume with evidence

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

A healthy job search is a measurable funnel. Track role fit, evidence used, application date, stage, follow-up and rejection reason. Improve conversion by role family rather than sending identical applications everywhere.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Random volume only; same resume/project order for every role; no follow-up; no reason codes; stopping applications while polishing one project forever.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH10 review - Project walkthrough interview

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

A strong walkthrough is a decision story. Explain why the metric and grain mattered, what broke or could have broken, how you validated, what the data supports, what it does not support, and what action you recommend.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Spending two minutes on background; no grain/validation; reading README; hiding a failure; claiming cause from observational finding.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH11 review - Technical interview preparation

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

Technical interviews test reasoning under constraints. For every Excel/SQL/Power BI/Python/statistics answer, state the intended grain or definition, show the method, and include at least one validation check.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Memorized answer with wrong denominator; syntax without grain; no NULL/join check; cannot explain own DAX/Python; collecting questions without fresh retry.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH12 review - Behavioral questions and career-start narrative

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

For behavioral answers, keep Situation/Task short and spend most time on Action, trade-offs, validation, communication and what changed. Fresher project/lab examples are valid if you clearly call them projects, not job experience.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Long life story; 'we' instead of your action; fake workplace example; no validation/trade-off; result vague; memorized speech that does not answer question.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH13 review - Offers, salary questions and professional negotiation

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

Salary and offer conversations are professional decision problems. Research the actual role and market, understand the full offer, avoid invented competing offers, and negotiate only from facts and a range you would genuinely accept.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Invented competing offer; quoting market number without role/location research; negotiating before understanding scope; stating a range you would not accept.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.

PCH14 review - Final readiness and continuous improvement

1. Strong attempt should demonstrate

Inspectable evidence, truthful/public-safe wording, working artifact/path, independent validation when the claim is technical, and an explanation of what you personally built or decided.

2. Expected reasoning

Job readiness is not a feeling. Maintain an evidence board for portfolio, resume/profile, technical drills, mock interviews and application funnel. Apply while improving; use interview errors to choose the next drill.

3. What to compare

Compare evidence/truthfulness/validation/reproducibility and exact hiring purpose before styling. Equivalent project/resume/interview wording is acceptable when it is accurate and defensible.

4. Likely repair

Waiting for perfection; readiness based on confidence only; weak technical topic never retested; application funnel not reviewed; repeating same mistake.

5. Fresh retry

Close this review. Complete the changed PCH task without copying prior wording. Append the new evidence; only a changed defensible artifact upgrades mastery.
