

Junior Data Analyst resume credibility checklist

- One page where practical; simple reading order; consistent dates; working contact/GitHub/LinkedIn links.
- Profile/summary states current truthful status and target; it does not imply employment you do not have.
- Skills are supported by projects/assessments and can be demonstrated.
- Use 2-3 strong projects; every quantified fact is defensible and maps to evidence.
- Project bullets show business question, method/tool, validated finding and recommendation/limitation where relevant.
- No rating bars, keyword stuffing, fake clients, fake work experience or unfinished certification presented as completed.
- Tailor by reordering/emphasizing truthful evidence to the role; do not add unsupported requirements.
- Export/reopen the PDF you actually submit and confirm text/links/readability.

LinkedIn / professional profile credibility checklist

- Headline/About match resume's current status and target role family.
- Featured projects link to working repositories; project names/descriptions match README/resume.
- Education and dates match resume.
- Course projects are labelled projects, not 'Data Analyst at [fictional company]'.
- Skills/keywords appear only when you can explain or demonstrate them.
- Public profile contains no sensitive personal details beyond what you intentionally choose to publish.
- GitHub profile README can highlight your best work; current GitHub mechanics may change, so verify against GitHub Docs.
- Before applying: open the profile as a stranger/recruiter and test every featured link.
