

M05 internal-QA evidence

Clean Power BI Modeling regeneration checkpoint. No Course 1 release claim is made.

Canonical lessons	8/8 PBM0-PBM7
Learner book	31 pages; 16-stage contract on all 8 lesson spans
Learner links	12 external + 8 internal TOC destinations
PBM0 installer	Official Microsoft learner-facing link present and rendered
Practice guide	9 pages: cover + PBM0-PBM7 guided/changed route
Protected practice review	9 pages; post-attempt only
Source workbooks	Practice + Gate A/B/C regenerated; 7 sheets each
Workbook integrity	All four XLSX CRC pass; zero formula-error tokens
Protected metric parity	Practice + Gate A/B/C independently recomputed and exact
Gate state machine	A terminal pass; B/C conditional remediation only
Static QA	138/138 PASS
PDF render/preflight	65 pages; no blank/out-of-bounds text

Forensic corrections made

PBM0 learner installer route

Initial QA found the official Power BI Desktop installer only in the source registry, not the learner page. The PBM0 PDF page now exposes the Microsoft installer directly and was re-rendered after editing.

PBM5 source precision

The current dedicated Microsoft Date-table documentation is the primary reference for PBM5. The older relationship reference remains in source history instead of being silently discarded.

Practice metric-label audit

The first independent recomputation compared Customers and Products using reversed protected labels. The workbook bytes were correct; the audit label order was corrected and practice now matches all protected controls.

No source-data sanitizing

Deliberate exact duplicate, invalid date/discount and unmatched-key traps remain in the source workbooks. Learners must detect/handle them through Power Query/model controls.

Workbook visual check

Representative README, fact, Date and evidence ranges were rendered after regeneration. Learner cells are readable; black areas outside selected render bounds are renderer background, not workbook content.

Runtime boundary and remaining Course 1 work

Power BI Desktop runtime

Still required before learner release: relationship creation/cardinality, dimension-to-fact filter propagation, Date-table behavior, Power Query transformation/refresh and PBIX save/reopen on a real supported Windows Power BI Desktop environment.

Mentor synchronization

Pending by design until all regenerated module filenames, learner-book pages and Gate routes are stable.

Remaining modules

M06-M11 still require clean beginner-first regeneration and module QA.

M05 status

Static internal-QA module candidate PASS only. It is deliberately not labelled FINAL, CONTENT FREEZE or fully audited.
