

Gate C protected controls - FreshCart Deliveries

Control	Expected
Source fact rows	75
Prepared rows after exact dedup	74
Exact duplicate removed	1
Dimension 1 unique after trim	5
Dimension 2 unique after trim	8
Third dimension unique	4
Unmatched dimension 1 keys	1
Unmatched dimension 2 keys	1
Unmatched third-dimension keys	1
Invalid discount rows	1
Invalid date rows	1
Gross Quantity x Rate total	412,350.00

Diagnostic rubric - do not copy answers

1. If row counts differ

Trace Applied Steps and identify the first transformation that changes row count. Exact duplicate removal is justified only after proving exact equality at the intended fact grain.

2. If a relationship fails

Check one-side duplicate/blank/type mismatch first. Count unmatched fact keys separately. Do not switch to many-to-many or bidirectional filtering as a repair shortcut.

3. If the total matches but quality checks fail

The model is still untrusted. A matching monetary control cannot cancel a failed key/unmatched/date/business-validity check.

4. Fresh retry

Close this review. Repair only the weak competency on changed data/model evidence, rerun downstream checks, and append the retry. Follow the Gate state machine; B/C are not automatic.
