

Repair 1 - Install/import/profile

Scope: PBM0-PBM1

- Use current official Power BI Desktop installer if a video screen differs.
- Reconnect through Transform Data if the wrong sheet/query was loaded.
- Profile grain, row count, required keys, types and business issues before transforming.
- Do not delete suspected duplicates before proving them.

Repair discipline

- Keep original PBIX/evidence.
- Repair the earliest weak layer.
- Close review before changed retry.
- Re-run downstream model validations after upstream repair.

Repair 2 - Transform and star schema

Scope: PBM2-PBM3

- Step back through Applied Steps to find the first row-count/type failure.
- Keep unresolved invalid/unmatched rows visible.
- Write grain before deciding fact/dimension roles.
- If a one-side key is not unique, investigate; do not force many-to-many.

Repair discipline

- Keep original PBIX/evidence.
- Repair the earliest weak layer.
- Close review before changed retry.
- Re-run downstream model validations after upstream repair.

Repair 3 - Relationships and Date

Scope: PBM4-PBM5

- Check duplicate/blank/type mismatch on the intended one side.
- Default to single-direction dimension -> fact and prove the filter path.
- Audit Date uniqueness, nonblank values and fact-date coverage.
- Use Month Number/true date for chronological order; defer DAX time intelligence.

Repair discipline

- Keep original PBIX/evidence.
- Repair the earliest weak layer.
- Close review before changed retry.
- Re-run downstream model validations after upstream repair.

Repair 4 - Trust and refresh

Scope: PBM6-PBM7 / Gate

- One matching total does not override failed key/unmatched checks.
- Reconcile source/prepared rows and stable control totals.
- Refresh after one controlled valid source change and re-run invariants.
- Gate B/C require explicit assignment after the prior Gate failure + review/repair.

Repair discipline

- Keep original PBIX/evidence.
- Repair the earliest weak layer.
- Close review before changed retry.
- Re-run downstream model validations after upstream repair.
