

M-PBIR - Executive report + QA + handoff

1. Business request

Management wants a compact sales-performance report that answers current performance, target attainment, trend, top region/category and on-time delivery, while another analyst must be able to validate and operate the PBIX after handoff.

2. Deliverables

Executive page; QA page; drillthrough page; tooltip page; explicit measure set; target/time measures; interaction evidence; refresh/publish notes; RLS role/View As evidence where available; handoff note and 2-minute defense.

3. Forbidden shortcuts

No implicit KPI aggregation as final logic; no daily target invented from monthly target; no hiding a failed validation; no slicer/page hiding described as security; no claiming service publish/scheduled refresh if unavailable.

Build sequence

- 1. Freeze M05 model. Write source and target grains.
- 2. Create/reconcile base measures.
- 3. Add CALCULATE/share-of-total branch.
- 4. Add target/variance/attainment at Region + Month.
- 5. Add YTD, previous-month and prior-year measures; test January.
- 6. Design Executive page with limited purposeful visuals.
- 7. Configure slicers, one deliberate interaction exception, drillthrough and tooltip.
- 8. Build QA page and reconcile protected practice anchors.
- 9. Prove Desktop Refresh; publish/scheduled refresh only if accessible.
- 10. Create/test static RLS role with View As or document unavailable service portion.
- 11. Save measure dictionary + handoff + limitations.

Validation and evidence checklist

- Line Count = 361; Order Count = 180; Customer Count = 12.
- Net Sales = 4,074,127.25; Total Cost = 2,469,180.00; Profit = 1,604,947.25.
- Margin % $\approx$ 0.393936.
- Jan 2026 Net Sales = 233,374.45; Dec 2025 = 119,033.85; Jan 2025 = 135,713.20.
- East Jan 2026 target = 278,000.00.
- Top Region = R3 / 1,368,507.60; top Category = Appliances / 1,728,196.55.
- Save one default, filtered and cleared interaction state; one drillthrough and tooltip check; one refresh change/control; RLS View As evidence if available.

Rubric and interview defense

1. Critical pass

Trusted model; explicit reusable measures; correct context/denominator; target grain defended; time boundaries checked; visual choice purposeful; interactions intentional; QA anchors reconcile; refresh/security claims evidence-based; handoff complete.

2. Failure routing

Measure/context -> PBD1-PBD3. Target -> PBD4. Time -> PBD5. Visual -> PBD6. Interaction -> PBD7. QA -> PBD8. Publish/refresh -> PBD9. RLS/handoff -> PBD10.

3. Defense

Explain the report in two minutes without the book: question -> model trust -> base measures -> context/target/time -> visual choices -> QA controls -> operating/security boundary -> decision/limitation.
