

Gate A - FitLife Memberships

1. Protected first attempt

Use C1_M06_POWERBI_DAX_REPORTING_GATE_A_DATA_RC1.xlsx and a fresh PBIX. Learner book, protected reviews, solved PBIX files, tutorials and AI-generated solutions are closed. Save attempt/evidence before opening review.

2. Required calculation layer

Create explicit base count/distinct-count/net value/cost/profit/margin measures using the scenario's real columns. Create one safe ratio and one CALCULATE/share-of-total style measure; explain context.

3. Required target and time layer

Use the supplied monthly targets only at their supported entity + Month grain. Build previous-month and prior-year comparison for Jan 2026 plus one YTD-style measure using Date.

4. Required report/interactions

Build concise KPI/trend/ranking/detail visuals. Add only useful slicers, configure/test one interaction behavior, and validate one drillthrough or tooltip context.

QA, refresh, security and handoff

5. QA page

Independently reconcile base KPI totals, one dimensional breakdown, target, Jan/Dec/prior-year values and one interaction state. A report cannot pass because screenshots look polished.

6. Refresh / publish

Prove Desktop Refresh on a controlled valid source change. If Power BI service/workspace access exists, document publish/workspace/refresh evidence. Otherwise state the access limitation and explain the workflow conceptually.

7. RLS / handoff

Create/test one static RLS role with View As when available. Explain why a slicer or hidden page is not security. Save measure definitions, target grain, refresh dependencies, validation controls, known limitations and PBIX version.

8. Critical failures

Broken model hidden with DAX; implicit/incorrect KPI logic; wrong denominator context; unsupported target grain; invalid time boundary; report/QA mismatch; unintended interaction; fake publish/refresh/RLS claim; inability to explain security/limitations.

Evidence and exact next route

9. Evidence

PBIX/version; measure list/DAX; Executive + QA screenshots; target/time controls; interaction state; Desktop refresh proof; publish/RLS evidence or explicit limitation; one failure/recovery note; confidence 1-5; 2-minute explain-back.

10. Exact next route

A clean Gate A pass ends M06. Failed A -> Review A + targeted repair + changed evidence; Gate B only if explicitly assigned. Review is post-attempt only. After repair, close the review and complete changed evidence before any retest.
