

## Gate C protected controls - CarePoint Clinics

| Control             | Expected         |
|---------------------|------------------|
| Visit Count         | 290              |
| Patient Count       | 45               |
| Net Billed          | 474,075.00       |
| Direct Cost         | 187,110.00       |
| Profit              | 286,965.00       |
| Margin %            | 0.605316         |
| Within Wait Target  | 162              |
| Within Wait %       | 0.558621         |
| Jan 2026 Net Billed | 27,105.00        |
| Dec 2025 Net Billed | 26,467.00        |
| Jan 2025 Net Billed | 24,675.00        |
| C01 Jan 2026 Target | 46,150.00        |
| Top Clinic          | C04 / 113,666.00 |

## Diagnostic rubric - repair, do not copy

### 1. Measure/context

If base totals differ, validate source columns, SUM vs SUMX, DISTINCTCOUNT and model filters. If ratios/shares fail, inspect numerator/denominator and REMOVEFILTERS scope.

### 2. Target/time

If target/time controls fail, inspect target grain, Date relationship, Month Start and Jan boundary. Do not invent missing target/time values.

### 3. Report/interactions

If totals are right but report behavior is wrong, test slicer/page/report filters, Edit interactions, drillthrough and tooltip context one state at a time.

### 4. Operations/security

Desktop Refresh, service publish/scheduled refresh and RLS are distinct capabilities. Record actual evidence; never claim access/behavior you did not test.

### 5. Fresh retry

Close this review. Repair only the weak competency and rebuild changed evidence. Follow the Gate state machine; B/C are never automatic.
