

M04 internal-QA evidence

Clean SQL-for-Analysts regeneration checkpoint. No Course 1 release claim is made.

Canonical lessons	9/9 SA1-SA9 + M-SQLA
Learner book	38 pages; exact 16-stage lesson contract
Contents / routes	10 internal destinations: SA1-SA9 + M-SQLA
External learner links	10: 8 Alex placements + MySQL date reference + Hindi/Urdu date visual
Source registry	11 rows incl. current SA4 visual + legacy source history
Practice SQL	9 guided + 9 changed independent blocks
Integrated project	Grain/cardinality micro-example + windows/rank/LAG + 2+ reconciliations
Evidence workbook	Append-only evidence + SA1-SA9/M-SQLA tracker
Gate A/B/C	Marketplace / Hotel / Subscription distinct multi-table fixtures
Protected fixture recomputation	All controlled fields match old protected registry exactly
Static QA	168/168 PASS
Rendered PDF pages	63

Cardinality proof and defects corrected

Gate A - Marketplace

Raw freight = 12,300.00; naive freight after one-to-many order-line join = 24,600.00. Line-sales total = 624,888.00. The Gate explicitly requires repair at the correct grain rather than DISTINCT.

Gate B - Hotel

Raw service_fee = 14,700.00; naive post-night-join service_fee = 29,250.00. Night-value total = 339,770.00.

Gate C - Subscription

Raw processing_fee = 12,700.00; naive post-invoice-line join processing_fee = 25,800.00. Line-amount total = 1,536,500.00.

Missing source segments repaired

SA2 now explicitly maps to the JOIN chapter 51:10-1:08:03. SA7 and SA8 map to the window chapter 1:45:58-1:58:55. The learner book supplies the cardinality/ranking nuances the generic video does not.

SA4 visual/source reconciliation

Current official MySQL date/time documentation controls syntax. A current Hindi/Urdu date-functions visual is retained as optional support; the prior date-video identity stays in source history instead of being silently deleted.

Gate instruction precision

Generic event/date wording was tightened so LEFT JOIN validation counts main rows without matching event records, and elapsed-day tasks point learners to the actual fixture end-date field.

Release boundary

Live MySQL simulation

MySQL Server/Workbench is not installed in this build environment. Static structure, deterministic fixture controls and document/package QA pass; live execution, MySQL runtime errors and result-grid behavior remain a release-level learner-device test.

Mentor synchronization

Pending by design until all Course 1 module file names, learner-book pages, practice routes and Gate paths are stable.

Remaining modules

M05-M11 still require clean regeneration and QA before whole-course certification.

M04 status

Static internal-QA module candidate PASS. This is deliberately not labelled FINAL, CONTENT FREEZE or fully audited.
