

M03 internal-QA evidence

Clean SQL Foundations regeneration checkpoint. No Course 1 release claim is made.

Canonical lessons	9/9 SF0-SF8
Learner book	34 pages; exact 16-stage contract on every lesson
Contents / page routes	9 internal lesson links: SF0 p6 -> SF8 p30
Current lesson source links	8 clickable external placements; SF1 intentionally book-led
SQL setup	12 customers + 48 orders expected; controlled reset only
Practice SQL	9 guided + 9 changed independent task blocks
Evidence workbook	Append-only log + SF0-SF8 mastery tracker
Gate A / B / C	Seller orders / replenishment / renewals; distinct fixtures
Protected Gate metrics	All recomputed from actual INSERT fixtures; exact parity
Protected reviews	Practice review + separate Gate A/B/C reviews
Static QA	118/118 PASS
PDF render/preflight	57 pages across current teaching/review PDFs

Defects caught and corrected

Generic Gate wording removed

The first regenerated Gate comments used generic words such as 'measure' and 'channel-like'. They now name each fixture's exact table, ID, date, group, status, measure, nullable field, duration field and channel column.

CASE thresholds restored

Gate A now uses `order_value >= 30,000 / 15,000`; Gate B `requested_qty >= 200 / 100`; Gate C `renewal_value >= 60,000 / 25,000`. These exactly reproduce the protected Large/Medium/Small counts.

Gate A domain corrected

The Gate A header previously described an operations/maintenance domain even though the fixture is `seller_orders`. It now consistently identifies Marketplace Seller Orders.

Protected metric parity proved

Every expected Gate control was recomputed from the actual INSERT rows: row count, distinct statuses/channels, NULL count, completed-status count, measure total, average duration, top measure, group/channel counts and CASE-band counts.

Assessment boundary enforced

Gate tasks explicitly remain single-table. JOIN, CTE, subquery and window-function syntax cannot substitute for the requested foundation reasoning; those topics are reserved for M04.

Release boundary and remaining Course 1 work

Live MySQL simulation

MySQL Server/Workbench is not installed in this build environment. Static SQL structure and fixture controls pass, but connection setup, live execution, result-grid behavior and MySQL-specific runtime errors still require learner-device/release-level simulation.

Mentor synchronization

Pending by design. The Course 1 Mentor will be regenerated only after module file names, learner-book pages, practice routes and Gate paths are stable across all rebuilt modules.

Remaining modules

M04-M11 still require the same clean beginner-first regeneration and module-level QA before the whole-course release gate can be attempted.

M03 status

Static internal-QA module candidate PASS. This is deliberately not labelled FINAL, CONTENT FREEZE or fully audited.
