

Gate A review - Checkout Simplification

1. Unlock condition

Open only after a genuine Gate workbook attempt is saved. This review provides acceptance controls and diagnostic direction, not a pre-attempt solution.

2. Protected objective controls

Control	Expected
Control n	1000
Treatment n	1000
Control rate	0.1200
Treatment rate	0.1500
Absolute lift pp	3.0000
Relative lift %	25.0000
z	1.9630
p-value	0.0496
95% CI low pp	0.0075
95% CI high pp	5.9925
Support control %	7.0000
Support treatment %	7.2000
Support change pp	0.2000

Business/guardrail decision and repair route

3. Business threshold

Minimum worthwhile effect = 1.00pp. Business threshold met = True. Guardrail max increase = 1.00pp. Guardrail breached = False.

4. Expected decision

LAUNCH / progress, subject to implementation checks.

5. Critical interpretation checks

Correct p-value language; CI as compatible uncertainty range/procedure; percentage-point units; no significance=importance shortcut; guardrail cannot be ignored; data/design quality overrides attractive point estimates.

6. Fresh retry / state

A clean pass ends M08; B only after failed A + Review A + targeted repair + explicit assignment. Close this review, repair the named competency on changed evidence, and keep the original attempt.
