

Gate C review - Mobile Onboarding

1. Unlock condition

Open only after a genuine Gate workbook attempt is saved. This review provides acceptance controls and diagnostic direction, not a pre-attempt solution.

2. Protected objective controls

Control	Expected
Control n	1200
Treatment n	1200
Control rate	0.0800
Treatment rate	0.1100
Absolute lift pp	3.0000
Relative lift %	37.5000
z	2.5062
p-value	0.0122
95% CI low pp	0.6569
95% CI high pp	5.3431
Support control %	5.0000
Support treatment %	8.7500
Support change pp	3.7500

Business/guardrail decision and repair route

3. Business threshold

Minimum worthwhile effect = 1.50pp. Business threshold met = True. Guardrail max increase = 1.00pp. Guardrail breached = True.

4. Expected decision

DO NOT LAUNCH AS-IS: primary metric improved but guardrail is breached.

5. Critical interpretation checks

Correct p-value language; CI as compatible uncertainty range/procedure; percentage-point units; no significance=importance shortcut; guardrail cannot be ignored; data/design quality overrides attractive point estimates.

6. Fresh retry / state

Gate C is remediation-only; clean C pass ends M08. There is no Gate D. Close this review, repair the named competency on changed evidence, and keep the original attempt.
